CAREER OBJECTIVE

AI & Data Science undergraduate experienced in building and deploying ML models, GenAI systems, and multi-agent LLM applications (RAG pipelines, vector databases, LLM APIs, REST APIs). Seeking an internship to design, build, and deploy AI/ML and GenAI solutions for real-world business use cases.

TECHNICAL SKILLS

GenAI & LLMs: LLM Integration (Gemini, Mistral7B), RAG, Vector DBs (FAISS, Chroma), LangGraph, Prompt Engineering | ML & NLP: Logistic Regression, Random Forest, KMeans, NLP (TF-IDF, Naive Bayes), Sentiment Analysis

Backend & Web: Python, FastAPI, REST APIs, SQL, Redis, Celery, MySQL, TypeScript, React, Next.js | Tools: Power BI, Streamlit, Git/GitHub, MS-Excel

WORK EXPERIENCE

Data Science with GenAI Intern, Innovexis — Apr 2026 – Jul 2026

- Worked in the Artificial Intelligence domain, applying AI and Generative AI techniques — including LLM-based solutions — to real-world business problems over a 3-month internship.
- Collaborated with the team on AI model development and evaluation, strengthening practical skills in applied AI and GenAI-driven problem solving.

Data Science Intern, Codveda Technologies — Feb 2026 – 22 Mar 2026

- Built ML classification models (Logistic Regression, Random Forest) on the Iris dataset; developed an NLP sentiment analysis model using TF-IDF and Naive Bayes.
- Performed data cleaning and EDA on client datasets, visualizing insights with Matplotlib/Seaborn and documenting workflows on GitHub.

Data Science Intern, Coding Samurai — Jan 2026 – Feb 2026

- Built a sentiment classification model for social media posts; performed data cleaning, preprocessing, and statistical visualization for modelling.

Data Science Intern, Cognifyz Technologies — Jul 2025 – Aug 2025

- Applied ML and EDA on tabular datasets using Python, Pandas, and NumPy; created Matplotlib visualizations to communicate trends.

AI & GENAI PROJECTS

MAP – Multi-Agent AI Automation Platform — Mar – Jun 2026

- Architected a multi-agent AI system (Planner, Executor, Analyzer, Memory) using LangGraph, with a RAG pipeline over FAISS/Chroma vector databases.
- Built a fallback engine switching between the Gemini LLM API and a local Mistral7B model, with Redis/Celery workers and Prometheus/Grafana monitoring (MLOps).

Shopper Spectrum – Customer Segmentation & Recommendation System — Jun 2026

- Built an ML pipeline (RFM + KMeans) to segment customers and a cosine-similarity recommendation engine, delivered via an interactive Streamlit dashboard.

Vaccination Data Analysis & Visualization — 2026

- Cleaned and modelled ~293M vaccination records into MySQL; built Power BI dashboards revealing a 77.61% average coverage rate and regional disparities.

EDUCATION

B.E., Artificial Intelligence & Data Science — Shree Ramchandra College of Engineering, SPPU, Pune (2023–2027) | CGPA: 9.26/10 (Ongoing)

TRAININGS & CERTIFICATIONS

- Tata Group Data Analytics Job Simulation (Forage) — GenAI-powered EDA, predictive modeling framework, and agentic AI collections strategy for Tata iQ (Jul 2026).
- Data Science with AI (Internshala) — scored 90%, top performer (Dec 2025 – Feb 2026) | Deloitte & J.P. Morgan Virtual Internship Programs | Oracle Database & SQL Certification.
- Hackathons: Odoo Hackathon (BookEase) and Smart India Hackathon (Smart Internship Matcher).
